

APPENDIX E

Errata

Protocol for Errata in LLNL Environmental Reports

The primary form of publication for the LLNL Environmental Report is electronic: the report is posted on the Internet. A limited number of copies are also printed and distributed, including to local libraries. If errors are found after publication, the Internet version is corrected. Because the printed versions cannot be corrected, errata for these versions are published in a subsequent report. In this way, the equivalency of all published versions of the report is maintained.

In 1998, LLNL established the following protocol for post-publication revisions to the environmental report: (1) the environmental report website must clearly convey what corrections, if any, have been made and provide a link to a list of the errata, (2) the Internet version must be the most current version, incorporating all corrections, and (3) the electronic and printed versions must be the same in that the printed version plus errata, if any, must provide the same information as the Internet version.

LLNL environmental reports from 1994 through 2011 can be accessed at <https://saer.llnl.gov/>.

Record of Changes to Environmental Report 2011

The following changes have been made to the Internet version of *Environmental Report 2011*.

- Change the electronic version of 2011 report: “Title of Section 2.1.3 changed from “Resource Conservation and Recovery Act and Related State Laws” to “California Accidental Release Prevention Program”
